A ball valve is a form of quarter-turn valve which uses a hollow, perforated and pivoting ball to control flow through it. It is open when the ball's hole is in line with the flow and closed when it is pivoted 90-degrees by the valve handle. The handle lies flat in alignment with the flow when open, and is perpendicular to it when closed, making for easy visual confirmation of the valve's status.

Refrigerant Valves | Parker NA

This valve works fine when it works but is made of plastic so won't last as long as they used to when made with metal. It will last about 4 years as did the original. I am not a big Toto lover as some of its models are poorly designed functionally and have many thin plastic parts which wear out or break quickly.
