Snakes of Wisconsin by Wisconsin DNR. For centuries, snakes have been misunderstood, under-appreciated, and even heavily persecuted. However, most of us are enthralled with them and our natural curiosity seeks to better understand them. Snakes occur throughout most of the world and vary in length from 5 inches to more than 30 feet.

Once the baby snakes have hatched, they will soon go into their first shed cycle. Separate the snakes into small hatchling enclosures. After their first shed cycle, you can present the hatchlings with their first meal. This should be a pinky mouse. There is a chance that the snake will not eat on the first day. If so, try again the next day.

Snakes of Wisconsin. Snakes play very important roles in many natural communities as predator and prey. They are extremely valuable to the agricultural community by keeping grain eating mammals in check. Recent studies suggest that snakes are also valuable in reducing disease threats posed by high rodent populations.
