Toxoplasmosis: Abortions, Weak Kids, Stillbirths
Toxoplasma gondii is a major cause of abortion in small ruminants throughout the world. Ingestion of sporulated coccidian oocytes early in gestation results in resorption or mummification; if ewes contract the disease late in gestation, abortions or perinatal deaths occur. Ewes do not usually appear sick.

Toxoplasmosis - Wikipedia

Toxoplasmosis is an infection caused by a parasite (toxoplasma gondii). You can find it in the intestines of some animals, including cats and pigs. The infection can cause cysts to form in your body, usually in your brain and muscles, including your heart. But if your immune system is healthy, it isn't likely to cause you any trouble.
