Abstract. Computer advances have played a major role in flow techniques development. On the one hand, one of the greatest hindrances to the development of flow techniques other than segmented flow analysis and flow injection analysis (FIA) was the lack of interfaces to control the analytical equipment via a computer.

The book provides a review of the current flow research, with a focus on rigorous analysis on methodology. The author takes the time to present methodological aspects in flow research to qualify empirical work. In addition, this volume presents neuropsychological considerations and empirical correlates of flow experiences.

Advances in Aerodynamics (AIA) is aimed to report the scientific and technological advances in aerodynamics from the aspects of academic research, industrial development and engineering applications, and to provide a platform for ideas exchange and discussion in this fast-changing field. The journal welcomes reviews and regular papers of novel studies on aerodynamic science and engineering.

Studies with the Experience Sampling Method (ESM) have shown that individuals experience more flow at work than at leisure. This indicates that people enjoy working but paradoxically at the same time leisure activities are preferred ("paradox of work"). We took a second look at the paradox of work by measuring flow directly, including affect measures, and differentiating between active and ...
