Algebra Age Problems (solutions, examples, videos)

Age and mixture problems are tricky questions in Algebra. It requires deep analytical thinking skills and great knowledge in creating mathematical equations. Practice these age and mixture problems with solutions in Algebra.

Algebra Age Problems With Solutions

Let the daughter's present age be x . Then the son's present age is $6x$. Since in one year the man will be six times as old as the daughter is now, the man's present age is $5x$. In ten years the man's age will be $5x + 10$, while the daughter's age will be $x + 10$ and the son's age will be $6x + 10$. Thus, you got that the daughter's present age is x years.
