An alternator adjuster arm is normally just a piece of plate steel that connects to the engine on one end and the alternator on the other end. Its sole purpose is to keep tension on the alternator belt. The steel arm is normally slotted, as can be seen below, and the bolt clamps the alternators adjustment ear to the adjusting arm.

To check an alternator, pop your vehicle's hood and hook up a voltmeter to the car's battery by connecting the red lead to the positive terminal and the black lead to the negative terminal. Make sure the voltmeter reads at least 12.2 volts, then start your car and rev the engine to 2,000 RPM. Keep the engine running and check the voltmeter again.

I have this exact alternator on a '99 Mastercraft ProStar 205v. The engine is a mercruiser 5.7L. The engine starts and runs fine but after running for a few minutes the engine will not turn off using the ignition switch. I've tested the relay connected to the purple/red stripe wire and it works fine. Any help is greatly appreciated.
