Introduction to Complex Analysis - excerpts

Complex functions that are differentiable at every point of an open subset of the complex plane are said to be holomorphic on . In the context of complex analysis, the derivative of at is defined to be Superficially, this definition is formally analogous to that of the derivative of a real function.

An Introduction to Complex Function Theory - GBV

This technical report gives a brief introduction to some elements of complex function theory. First, general definitions for complex differentiability and holomorphic functions are presented. Since non-analytic functions are not complex differentiable, the concept of differentials is explained both for complex-valued and real-valued mappings.

we establish for complex delta analytic functions a version of the classical Cauchy integral theorem. To do so, the concepts of connectedness, domain, and fence of a set are introduced for sets in the time scale complex plane. 2. FUNCTIONS OF TWO REAL TIME SCALE VARIABLES Let T 1 and T 2 be time scales. Let us set T 1 T 2 = f(x;y) : x2T 1;y2T 2g. The set T 1 T
