Authorama is a very simple site to use. You can scroll down the list of alphabetically arranged authors on the front page, or check out the list of Latest Additions at the top.

Anatomy Of The Monocotyledons Vol

The history of botany examines the human effort to understand life on Earth by tracing the historical development of the discipline of botany—that part of natural science dealing with organisms traditionally treated as plants.. Rudimentary botanical science began with empirically-based plant lore passed from generation to generation in the oral traditions of paleolithic hunter-gatherers.

A leaf (plural leaves) is the principal lateral appendage of the vascular plant stem, usually borne above ground and specialized for photosynthesis.The leaves and stem together form the shoot. Leaves are collectively referred to as foliage, as in "autumn foliage". In most leaves, the primary photosynthetic tissue, the palisade mesophyll, is located on the upper side of the blade or lamina of ...

A typical seed includes two basic parts: an embryo;; a seed coat. In addition, the endosperm forms a supply of nutrients for the embryo in most monocotyledons and the endospermic dicotyledons.. Seed types. Seeds have been considered to occur in many structurally different types (Martin 1946). These are based on a number of criteria, of which the dominant one is the embryo-to-seed size ratio.

Cymbopogon citratus is a perennial grass that has been intentionally introduced in tropical and subtropical regions of the world for the essential oil extracts from its leaves and to be used as a culinary and medicinal herb. It is a tall grass with rhizomes and densely tufted fibrous roots, which tillers profusely and has the potential to escape from cultivation.

Cymbopogon citratus (lemongrass)

Con más de 250.000 especies, las angiospermas forman un grupo taxonómico evolutivamente exitoso que conforma la mayor parte de la flora terrestre existente. La flor es el carácter definitorio del grupo y es, probablemente, un factor clave en su éxito evolutivo. [3] La flor está unida al tallo por un eje, denominado pedicelo, que se dilata en su parte superior para formar el receptáculo ...
