and the voltage given through the DC motor will change based on the duty cycle, so the motor speed will change. A motor-driver IC is connected to the Arduino board for getting pulse width modulation signals and sending preferred o/p for DC motor speed control.

Electrical Projects for Electrical Engineering Students

Noncontact Digital Tachometer using 8051:
Here we design a simple non contact tachometer using microcontroller which can measure speed with an accuracy of 1 rev/sec.
8 Channel Quiz Buzzer using 8051
