The setup above shows a William Optics Zenithstar 73 refractor with a 50mm guide scope and camera mounted on top. If you are looking to add a small guide scope package to your existing astrophotography setup, you can build a system using the components of your choice, or invest in guide scope package that's ready to go.

A Basic Deep-Sky Setup for DSLR Astrophotography ...

The difference between a scope that's designed to observe and one that's designed for taking photos is that the focal ratio is more important in an astrophotography telescope than a normal one. The reason why focal ratio rules this sector of telescopes is primarily because the speed at which a lens

Access Free Astrophotography Guide Scope

captures the light from deep space is more important than detail a lens captures.
