Symptoms of Clogged Evaporator Drains The drain lines that carry the water from the drain pan to outside the car can get clogged and fill up with water. Once they fill up, the drain pan fills up. After the drain pan collects water and a corner is taken while driving, the water spills out of the drain pan on the left or right side.

To keep the conditions perfect inside your Audi, every two years we recommend having an air conditioning service – including a gas top-up and detailed inspection. Between services, we can also do an air conditioning refresh: an ultrasonic treatment that clears microbial, fungal and bacterial particles to keep the air pure and fresh.

The Audi e-tron range uses the CCS charging standard, which consists of a combined AC and DC inlet port. The top portion of the inlet is for the Type 2 connector, which is used when charging at home, or at public slow and fast AC points. Both the upper and lower sections on the inlet are used to carry high power during rapid DC charging.

Do not expose any components of the air-conditioning system to heat. After paintwork, do not heat vehicles above 75°C (drying furnace). If this cannot be avoided, drain the air-conditioning system beforehand. When removing the service tubes from the vehicle, do not point the connections toward your body. Refrigerant residues may leak.
