Math 497: Special Topics in Elementary Differential Geometry

Publisher Summary. This chapter focuses on the geometry of curves in  $\mathbb{R}^3$  because the basic method used to investigate curves has proved effective throughout the study of differential geometry. A curve in  $\mathbb{R}^3$  is studied by assigning at each point a certain frame—that is, set of three orthogonal unit vectors. The rate of change of these vectors along the curve is then expressed in terms of the ...
