falling slag erosion, and coal particle erosion can cause erosion on the boiler tubes. Fly ash erosion, is a significant boiler tube failure concern, occurs in the regions with high local flue gas velocities, with high ash loading, and with abrasive particles such as quartz Corrosion: Deterioration and loss of material due to chemical attack.

Boiler Tube Failure Investigation

The tube failures in a boiler during initial phase of operation are different from the types that occur after prolonged operation. During the initial period of operation of boiler the type of tube failures seen are short term overheating, weld failures, material defects, chemical excursion failure, and sometimes fatigue failures.
