- Three basic types of primary bonds: each of them formed by different ways of sharing the electrons to satisfy the octet rule (atoms stable when they have filled valence shell. covalent and metallic bonds. which for many atoms means 8 electrons. exception is hydrogen). Three types : ionic.Primary Bonds • One way to define chemical compounds is that they are groups of atoms ...

Bond Energy - Mrs. allen's chemistry class

A C-C bond has an approximate bond energy of 80 kcal/mol, while a C=C has a bond energy of about 145 kcal/mol. We can calculate a more general bond energy by finding the average of the bond energies of a specific bond in different molecules to get the average bond energy.

The bond energy for a particular type of bond can vary from one molecule to another because the atomic environment of a bond can influence the amount of energy needed to break the bond. For example the carbon-carbon bond in the two molecules shown below may have the same bond energy because the surrounding atoms are different.
