Pathology Outlines - Bone Marrow - nonneoplastic

The presence of lymphoid aggregates in the bone marrow has been reported to be more frequently associated with certain conditions including aging, autoimmune diseases, inflammatory conditions, and infectious disorders. 2,9 They have also been reported to be commonly identified in patients with myeloproliferative neoplasms, especially primary myelofibrosis, 4 and rarely in association with myelodysplastic syndromes. 10 Moreover, an increased incidence of benign aggregates in patients with ...

differential Practical advices •  
Always do your differential with  
1,000x magnification. • • Count at  
least 200-300 nucleated cells •  
Between 40-60 cells can be counted  
in one field with oil immersion. • It  
becomes difficult with 100 or more  
cells, as we tend to skip or to count  
the same cells twice.
