Bruising Peg. Pages from the journal of Margaret Molloy ...

Most bruises form when small blood vessels (capillaries) near the skin's surface are broken by the impact of a blow or injury — often on the arms or legs. When this happens, blood leaks out of the vessels and initially appears as a black-and-blue mark. Eventually your body reabsorbs the blood, and the mark disappears.

Bruise - Wikipedia

Any type of traumatic injury, such as a fall, can cause capillaries (small blood vessels) near your skin's surface to break and leak red blood cells. This causes the reddish-purple or "black and blue" appearance of bruises on your skin. Technically known as contusions, bruises may result from virtually any injury to blood vessels in your skin.
