ARM. This is perfect for lots of scenarios, including desktop applications.

Using Cross-Platform Technology to Build Mobile Apps

For the past few months, I've been working on a new way to build cross-platform, native iOS and Android apps called Jasonette. It lets you describe an entire app with nothing but a single JSON markup. If your app consists entirely of JSON, it can be treated like any other data. And it can be served remotely from the cloud on-demand.
