By this math, the cordwood sections of our home weigh roughly 56,000 pounds or 28 TONS, minus whatever weight is negated by the windows. Not only should your foundation be able to support the weight, it needs to be able to support it's width. Standard stud framed walls are only 6 inches deep,...

[Foundations for Cordwood Building: How We Built Ours \(and ...](#)

Cordwood masonry is an ancient building technique where walls are constructed from "log ends" laid transversely in the wall, the same way that firewood is stacked. In the typical cordwood home, the walls are mortared at each end of the wood, while the space around the logs in the middle is filled with a sawdust and lime insulation. My neighbors here in Pony built the cordwood home pictured here.
