RG-6 - Wikipedia
RG-58/U is a type of coaxial cable often used for low-power signal and RF connections. The cable has a characteristic impedance of either 50 or 52 ?. "RG" was originally a unit indicator for bulk RF cable in the U.S. military's Joint Electronics Type Designation System.There are several versions covering the differences in core material (solid or braided wire) and shield (70% to 95% coverage).

Televiziune prin cablu - Wikipedia
A coaxial RF connector (radio frequency connector) is an electrical connector designed to work at radio frequencies in the multi-megahertz range. RF connectors are typically used with coaxial cables and are designed to maintain the shielding that the coaxial design offers. Better models also minimize the change in transmission line impedance at the connection in order to reduce signal ...

Coaxial cable - Wikipedia
In geometry, coaxial means that two or more three-dimensional linear forms share a common axis.Thus, it is concentric in three-dimensional, linear forms.. A coaxial cable, as a common example, is a three-dimensional linear structure.It has a wire conductor in the centre (D), a circumferential outer conductor (B), and an insulating medium called the dielectric (C) separating these two conductors.

Coaxial - Wikipedia
RG-6/U is a common type of coaxial cable used in a wide variety of residential and commercial applications. An RG-6/U coaxial cable has a characteristic impedance of 75 ohms. The term, RG-6, is generic and is applied to a wide variety of cable designs, which differ from one another in shielding characteristics, center conductor composition, dielectric type and jacket type.
