Because the initial point of any vector in standard position is known to be  $(0, 0)$ ,  $(0, 0)$ , we can describe the vector by looking at the coordinates of its terminal point. Thus, if vector  $v$  has its initial point at the origin and its terminal point at  $(x, y)$ ,  $(x, y)$ , we write the vector in component form as

Fractional calculus is a branch of mathematical analysis that studies the several different possibilities of defining real number powers or complex number powers of the differentiation operator  $D = ()$ , and of the integration operator  $J = ()$ , and developing a calculus for such operators generalizing the classical one.. In this context, the term powers refers to iterative application of a linear ...
