In calculus and related areas of mathematics, a linear function from the real numbers to the real numbers is a function whose graph (in Cartesian coordinates) is a line in the plane. The characteristic property of linear functions is that when the input variable is changed, the change in the output is proportional to the change in the input.. Linear functions are related to linear equations

En matemáticas, una rotación de ejes en dos dimensiones es una aplicación de los puntos de un sistema de coordenadas cartesianas xy sobre los puntos de un segundo sistema de coordenadas cartesianas denominado $x'y'$, en la que el origen se mantiene fijo y el los ejes x' e y' se obtienen girando los ejes x e y en sentido contrario a las agujas del reloj a través de un ángulo .
