Bearded dragons are lizards that are native to Australia. They live in rocky and arid regions of the country and are adept climbers. In the wild they can be found on branches, basking on rocks, and staying cool in bushes and other shaded areas.

Pet Bearded Dragon Care, Facts & Information

Bearded dragons require UVB to enable Vitamin D3 synthesis and to prevent illnesses like metabolic bone disease. Vitamin D3 is essential to calcium absorption, with calcium playing a major role in various critical biological functions. Bearded dragons also require UVA; this wavelength stimulates feeding, breeding, basking and overall health. They also require a basking heat source, most commonly a light emitting source, to provide a basking area.
