## **Chapter 15: Characteristics & Applications of Polymers**

# Download Free Chapter 15

## Characteristics

Solution From  
Figure 15.3, the  
elastic modulus is  
the slope in the  
elastic linear, or  $E$   
 $= \frac{\text{stress}}{\text{strain}}$   
 $= \frac{1}{2} \frac{1}{2}$  From the  
plot in Figure 15.3  
(20°C curve) let us  
assign  $\sigma_1 = 30 \text{ MPa}$   
 $\sigma_2 = 0 \text{ MPa}$  And  
their corresponding  
strains are  $\epsilon_1 = 9$   
 $\epsilon_2 = 0$  Thus,

# Download Free Chapter 15

## Characteristics

the value of the  
elastic modulus is  
determined as

$$\text{follows: } E = \frac{1}{30} \times \frac{10^9}{10^3} = 3.3 \text{ GPa}$$

(483,000 psi) The  
value range cited  
in Table 15.1 is  
2.24 to 3.24 GPa  
(325,000 to  
470,000 psi).
