Ch. 18 Answer Key
18.4 COLOR Separating White Light Into Colors 1. What did Isaac Newton's experiments with a prism in 1666 show? White sunlight is made up of all the colors of the visible spectrum. 2. What happens when white light passes through a prism? Shorter wavelengths bend more than longer wavelengths -this makes the colors separate. 3.

Chapter 18
18.4 Color As white light passes through a prism, shorter wavelengths refract more than longer wavelengths, and the colors separate. • The process in which white light separates into colors is called dispersion. • A rainbow forms when droplets of water in the air act like prisms. The droplets separate sunlight into the spectrum.
