Chapter 22: The Land Plants From Biology: The Unity and Diversity of Life, Starr et al. 2018 Introduction With chapter 22, we enter into a new set of organisms, the land plants. Land plants are in Domain Eukarya, just as the protists were and there is a link to the type of green algae, the charophytes. Land plants and the charophytes share a common ancestor and are considered to be very ...

*Chapter 22: The Diversity of Plants
Introduction to plants. Plants are an incredibly important kingdom of organisms. They are multicellular organisms with the amazing ability to make their own food from carbon dioxide in the atmosphere. They provide the foundation of many food webs and animal life would not exist if plants were not around. The study of plants is known as botany and in this introduction to plants we look at key ...*

Another distinguishing characteristic of plants is their type of chlorophyll.

Chlorophyll is used to absorb energy from the sun during the process of photosynthesis. Plants have chlorophyll a and chlorophyll b, while many species of algae do not have chlorophyll b. Many evolutionary biologists believe that the green algae gave rise to the land plants.
