Chemotherapy drugs are typically given either intravenously (IV) or by mouth (orally). Other methods of administration are done, albeit less commonly. The frequency and duration of chemotherapy depend on many factors, including the type of cancer you have, the stage of cancer, and your current health.

10 Foods to Eat During Chemotherapy

Chemotherapy is the use of drugs to destroy cancer cells. It usually works by keeping the cancer cells from growing, dividing, and making more cells. Because cancer cells usually grow and divide faster than normal cells, chemotherapy has more of an effect on cancer cells. However, the drugs used for chemotherapy are powerful, and they can still cause damage to healthy cells.
