Church Heating Category | EHS
Church heating systems need to meet all the highest standards and requirements, but it is not always easy to achieve. One of the most important requirements for the church heating is to prevent dampness that causes damage to damp-sensitive church contents such as the organ, frescoes, paintings, architecture, etc.

ELECTRIC HEATING SOLUTIONS
Infrared heating is user-friendly. Infrared heating is also really easy to use. Used alongside a smart heating system, they can be controlled remotely, meaning on-one has to keep popping in to turn the heating on in time for services. The panels give off heat almost instantly, with rays travelling through space and hitting anyone in their path.

Church Radiant Heating
ChurchEcoMiser is a new and exciting approach for heating churches using electricity as a fuel source and we believe the first genuinely new type of system designed specifically for churches in a generation.. It is designed to warm the fabric of the building evenly and gently with individual radiators sited throughout the church. The system has all the benefits of a traditional hot water based ...
