Human
Circulatory
System
The Circulatory
System. The
circulatory
system consists

of the heart and the blood vessels (veins, arteries and capillaries). Veins bring blood away from the heart. They have a wider lumen and thinner walls than arteries, and valves to prevent backflow of blood.

Notes Blood The**

The main functions of blood are to transport oxygen, carbon dioxide, water, nutrients, hormones and waste around the body. Blood also fights infection and regulates temperature.

Composition of blood: 1. Plasma constitutes for about 54% of our blood. 92% of it is water. 2.
