missile, is a guided self-propelled system, as opposed to an unguided self-propelled munition, referred to as a rocket (although these too can also be guided). Missiles have four system components: targeting or missile guidance, flight system, engine, and warhead.

Long Range Anti-Ship Missile (LRASM)

Despite their different methods of delivery, antiship missiles formed a coherent class largely because they were designed to penetrate the heavy defenses of warships. The Hs-293 missiles developed by Germany during World War II were the first guided antiship missiles. Though accurate, they required the delivery aircraft to stay on the same line of sight as the weapon

The Coherent seeker upgrade will likely bring both missiles to the Block 3 or Block2 Mod3 standard. With this latest variant of the Exocet family (which started its service in the 1970ies with the MM38) in its inventory, the French Navy is set to have a very capable anti-ship missile until its replacement, the FCAS/W, comes along in the 2030ies.

Research Project Agency (DARPA) and Office of Naval Research (ONR).

Spike (ATGM) - Wikipedia

Missile guidance refers to a variety of methods of guiding a missile or a guided bomb to its intended target. The missile's target accuracy is a critical factor for its effectiveness. Guidance systems improve missile accuracy by improving its "Single Shot Kill Probability" (SSKP), which is part of combat survivability calculations associated with the salvo combat model.
