Dense connective tissue is composed
of large amounts of closely packed
collagenous fibers. In comparison to
loose connective tissue, dense tissue
has a higher proportion of collagenous
fibers to ground substance. It is thicker
and stronger than loose connective
tissue and forms a protective capsule
layer around organs such as the liver

and kidneys.

CTOS > Home

It is the goal of the presentation to shed light on the mechanosensing of connective tissue cells and the mechanisms how minimally-invasive approaches can regulate healing patterns. Additionally, the critical factors that should be controlled by the surgeons are discussed and presented by clinical cases.
