Climate change spurs doubling of disasters since 2000: UN Hazards are natural events, occurring more or less frequently and of a greater or lesser magnitude, but disasters are due to risk-blind development. Photo: UN MINUSTAH This post is part of a series from UNDP experts sharing their views and experiences in the lead up to the Global Platform on Disaster Risk Reduction taking place in May and the World Reconstruction Conference in June.

NATURAL HAZARDS - Huon Valley Council

Natural disasters have caused enormous losses in many countries and have set back economic progress in developing countries by years. The future looks even worse, as populations in many parts of the world migrate into hazard-prone regions

hydrological hazards, meteorological hazards, and biological hazards. Geological hazards are hazards driven by geological (i.e., Earth) processes, in particular, plate tectonics. This includes earthquakes and volcanic eruptions.

Natural disaster - Wikipedia

Climate change is largely to blame for a near doubling of natural disasters in the past 20 years, the United Nations said Monday. The UN Office for Disaster Risk Reduction said 7,348 major disaster events had occurred between 2000 and 2019, claiming 1.23 lives, affecting 4.2 billion people and costing the global economy some \$2.97 trillion. The figure far outstrips the 4,212...
