CSS Style Guides | CSS-Tricks

Cascading Stylesheets or CSS is the first technology you should start learning after HTML. While HTML is used to define the structure and semantics of your content, CSS is used to style it and lay it out. For example, you can use CSS to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

CSS Grid Layout is the most powerful layout system available in CSS. It is a 2-dimensional system, meaning it can handle both columns and rows, unlike flexbox which is largely a 1-dimensional system. You work with Grid Layout by applying CSS rules both to a parent element (which becomes the Grid Container) and to that element's children (which become Grid Items).

CSS - Quick Guide - Tutorialspoint

For this reason, CSS had an alternative box model introduced some time after the standard box model. Using this model, any width is the width of the visible box on the page, therefore the content area width is that width minus the width for the padding and border. The same CSS as used above would give the below result (width = 350px, height ...
