Bridge culverts replace box culverts where the foundation is non-erodible and a paved floor is not necessary. Generally selection and type of material depends on the comparative cost, location of structure, availability of skilled labor, time limitations. Culvert begin upstream with head walls and terminates down stream with end walls.

An arch culvert is made up of metal, stone masonry, concrete, RCC etc. Construction does not take a lot of time and unlike box culvert, water diversion is not necessary, as it can be installed without disturbing the water current. Thus, it can be termed as a Low Profile Culvert. This type of culvert maintains the natural integrity of the wash bed.

This document explores the effect of longitudinal bending on joints in rigid (reinforced concrete) and flexible (corrugated steel and thermoplastic) culverts. The report examines two joint types, those that release the longitudinal bending moments (denoted 'moment-release joints') like gasketed bell and spigot joints, and those that transfer them (denoted 'moment-transfer joints') such ...

Factors affecting the hydraulic design A culvert is a structure whose main objective overcome an obstacle to the passage of water. In most cases apply to road design, ie when the flow is intercepted by a road or railway. When the geometric design of a road, it is done, it usually gets in the natural movement of water runoff area location.

What is a Culvert? Culvert is a tunnel carrying a stream under a road or railway. A culvert may act as a bridge for traffic to pass on it. They are typically found in a natural flow of water and serves the purpose of a bridge or a current flow controller.. Culvert is provided under roads and highways for a crossing of water, as road embankment cannot be allowed to obstruct the water flow.

Design & Construction of Culverts - Civil Engineering

Circular pipe culverts are widely used in transportation applications to transport stormwater under roadways, railways, etc. Corrugated metal and concrete are used for many of these pipe culverts. Major design parameters for culvert design are the diameter and slope of the pipe for a specified culvert material.
