SUSTAINABLE URBAN EXTENSIONS & NEW SETTLEMENTS

Loud, densely packed subway stations, piles
of garbage that often line the streets, and
almost constant urban congestion do little to
add to a more sustainable image for New York.
Yet a recent study from one of the leading
consulting firms in sustainable design found
New York to not only be the most sustainable
city in the United States but rank 20th
internationally (1).

CityTalk | Framing sustainable urban logistics in cities

By Prem Narayan A city is a hub of urbanisation and made up of environment, infrastructure, public space and information network. In recent years, the term Smart City has been emerging in the country. For Smart City to be sustainable, monitoring of public services, multi-modal transport system, effective use of information & communication technology and smart mobility have to be ensured also ...

The Sustainable Urban Package Delivery Method of the ...

With these challenges in mind, how should cities be thinking about steering their urban logistics systems in a more sustainable direction? Urban logistics is defined as the goods and service-related transport movement that begin and ends in the city, and traditionally, the performance of the system is measured against operational efficiency, reliability, and profitability.
