How to Design a Coil for Specific Inductance

A Rogowski Coil signal is a scaled time derivative, $di(t)/dt$ of the primary current instantaneous signal. To use such signals with phasor-based protective relays, signal processing is required to extract the power frequency signal.

What is a Rogowski Coil?

Designs. The high precision Rogowski Coil design presented here consists of two printed circuit boards (PCBs) located next to each other. Each PCB contains one imprinted coil wound in opposite directions (clockwise and counter-clockwise). The top and bottom sides of each PCB are imprinted to form a coil around the center of the board.

Rogowski, is an electrical device for measuring alternating current or high-speed current pulses. It consists of a helical coil of wire with the lead from one end returning through the centre of the coil to the other end, so that both terminals are at the same end of the coil. The whole assembly is then wrapped around the straight conductor whose current is to be measured. There is no metal core. The winding density, the diameter of the coil and the rigidity

The Rogowski measuring principle is a special form of transformational current measurement of sinusoidal and non-sinusoidal alternating currents. The Rogowski coil is a patented, iron-free induction coil (air coil). In order to attain ideal accuracy, this air coil should be almost completely closed.

Rogowski coil - Wikipedia

The key difference is that the Rogowski coil has an air core as opposed to the current transformer, which relies on a high-permeability steel core to magnetically couple with a secondary winding. The air core design has a lower insertion impedance, which enables a faster signal response and a very linear signal voltage.

The theory is given of the voltage output of a Rogowski coil excited by a current pulse flowing along the axis of the coil. In this theory the Rogowski coil is considered as a delay line. The results do not differ from those obtained usually by considering the coil as a voltage source dI/dt with an inductive output impedance.
