Brake Rotors - Front & Rear Disc Brakes

Brake rotors are metal discs that are attached to the axles of a vehicle. When the driver pushes the brake pedal, the brake pads press on the rotor, creating friction, which forces the wheels to turn slower. That friction also causes the disc to wear out, and to need resurfacing (turned).

Diagram of ford e250 rear brakes and rotors - Fixya

A brake rotor consists of two discs for the pads to press against, and a ribbed support between the discs for heat dissipation. The friction between the pads and rotors converts rotational energy into heat, bringing your vehicle to a stop. This friction warps the rotors over time. Warped rotors provide less consistent contact between your pads ...
