Fractional calculus is a branch of mathematical analysis that studies
the several different possibilities of defining real number powers or
complex number powers of the differentiation operator $D = ()$, and of
the integration operator $J = ? ()$, and developing a calculus for such
operators generalizing the classical one.. In this context, the term
powers refers to iterative application of a ...

attention due to its potential applications in the mathematical modelling of real-world phenomena with memory effects. In the present paper, the chaotic behaviour of fractional difference equations for the tent map, Gauss map and $2x \pmod{1}$ map are studied numerically.

Exploring Discrete Fractional Calculus - Undergraduate ...

Fractional calculus was formulated in 1695, shortly after the development of classical calculus. The earliest systematic studies were attributed to Liouville, Riemann, Leibniz, etc. [1,2]. For a long time, fractional calculus has been regarded as a pure mathematical realm without real applications.
