Dry stone retaining structures are structures made of individual decimeter stone blocks in contact. One advantage of this construction technology lies in the weak amount of embodied energy required for their construction, and uses only local materials.

Yield design modelling of dry-stone retaining walls

Dry-stone masonry retaining walls represent a traditional form of construction which can be found all over the world, i.e., in Asia, Africa, North and Latin America, Europe and Australia (Colas et al., 2008). Such walls are composed of a lot of stones interlocked with each other without mortar.

3D failure of a scale-down dry stone retaining wall: A DEM ...
Dry stone, sometimes called drystack or, in Scotland, drystone, is a building method by which structures are constructed from stones without any mortar to bind them together. Dry stone structures are stable because of their unique construction method, which is characterized by the presence of a load-bearing façade of carefully selected interlocking stones.
