Dynamical contact problems with friction : models, methods ...

Abstract Dynamical contact is one of the common research topics because of its wide applications in the engineering field. The main goal of this work is to develop a time-stepping algorithm for dynamic contact problems. We propose a finite element approach for elastodynamics contact problems [1].

Dynamical Contact Problems With Friction

The aim of this book is to describe an efficient procedure to model dynamical contact problems with friction. This procedure is applied to different practical problems and verified by experiments. Friction contacts are used to transmit forces or to dissipate energy.

Dynamical Contact Problems with Friction: Models, Methods ...

Friction modeling for dynamic system simulation EJ Berger CAE Laboratory, Department of Mechanical, Industrial, and Nuclear Engineering, University of Cincinnati, PO Box 210072, Cincinnati, OH 45221-0072; ed.berger@uc.edu Friction is a very complicated phenomenon arising at the contact of surfaces. Experiments

Friction modeling for dynamic system simulation

Frictional contact mechanics is the study of the deformation of bodies in the presence of frictional effects, whereas frictionless contact mechanics assumes the absence of such effects. Frictional contact mechanics is concerned with a large range of different scales.

Dynamic frictional contact problems involving elastic ...

The simulation of dynamical contact problems with friction provides insight into many complex processes in, e.g. mechanics or biomechanics. It is of crucial importance to consider the effects of friction at the interface accurately, since they influence the behavior of the whole mechanical system.

Multiple Solutions in Dynamic Contact Problems With Friction

Zhou et al. solved a similar dynamic half-plane problem by including friction. The dynamic behavior of a frictional punch moving over the surface of an anisotropic material was considered by Zhou et al. . A solution for a moving contact problem between a rigid punch and a piezomagnetic medium was developed by Zhou and Kim .

Dynamical Contact Problems with Friction: Models, Methods ...

Although the English used in Dynamical Contact Problems with Friction: Models, Methods, Experiments and Applications may not be perfect, it is certainly more than adequate. While the figures could be improved, they too are more than adequate considering both the aims of the book and the intended audience.

Solution procedure of dynamical contact problems with friction

The main goal of the pre sent work is to evaluate the various solutions for the dynamic c ontact problem with friction and to compare theirs with th e solution of the static contact problem.

Frictional contact mechanics - Wikipedia

Contact dynamics deals with the motion of multibody systems subjected to unilateral contacts and friction. Such systems are omnipresent in many multibody dynamics applications. Consider for example Contacts between wheels and ground in vehicle dynamics Squealing of brakes due to friction induced oscillations Motion of many particles, spheres which fall in a funnel, mixing processes Clockworks Walking machines Arbitrary machines with limit stops, friction. Anatomic tissues In the following it is

friction on a part of the boundary where the normal stresses are prescribed. Many of the unresolved mathematical difficulties can be traced to the requirement of an unilateral (noncompliant) contact constraint. Infact. these unilateral dynamic contact problems are a particular case of general classes of evolution problems governed by second-order (in
