**Of all of this, the relay could be
stuck closed, forcing the
compressor to run all the time (see
fuse box diagram below, for
location of the relay). This should
be a standard 4-pin relay. Swap it
with either of the Aux Fan relays to
see if the compressor turns off
(assuming that it is always running,
per your description).**

working. It just doesn't.

A/C Compressors & Clutches for BMW 525i for sale | eBay

The very 1st thing you do is see if the AC system has lost its charge of refrigerant. If the system is low on charge then the relay will not engage because it receives no signal from Compressor cycling switch which in most Fords is located in the low side AC line from the compressor, the low pressure line is the larger of the 2 lines from the AC compressor..
