Igneous rocks form from hot, molten rock that has solidified. Hot molten rock inside the Earth is called magma. Once it reaches the surface, it is called lava. Igneous rocks form when, deep inside the Earth, the temperatures are high enough to melt rock. As this molten rock material rises to the surface, it cools and solidifies into a solid rock.

Produced by the crystallization of molten rock rising from Earth's interior, igneous rocks are the primary crustal material. After formation, these may be transformed by heating and pressure into metamorphic rocks. Once exposed at the surface, both igneous and metamorphic materials may be degraded by wind, ice, and water, yielding
