Engineering Electromagnetic Fields

An electromagnetic field is a magnetic field produced by moving electrically charged objects. It affects the behavior of non-moving charged objects at any distance of the field. The electromagnetic field extends indefinitely throughout space and describes the electromagnetic interaction. It is one of the four fundamental forces of nature. The field can be viewed as the combination of an electric field and a magnetic field. The electric field is produced by stationary charges, and the magnetic

The photon theory is not discussed at all, only the electromagnetic wave theory; but we know that energy of emission or absorption depends on photon frequency not on wave amplitude. No step-by-step algorithms are given for the design of transmission lines, waveguides, cavity resonators, or antennas.
