Elements Of Evolutionary Genetics [PDF]
Mobile genetic elements (MGEs) are a type of genetic material that can move around within a genome, or that can be transferred from one species or replicon to another. MGEs are found in all organisms. In humans, approximately 50% of the genome is thought to be MGEs. MGEs play a distinct role in evolution.

The Charlesworths have written a magnificent book on the subject. This book has only a few peers, albeit outdated. They are: Dobzhansky's "Genetics of the Evolutionary Process," and Lewontin's "The Genetic Basis of Evolutionary Change." I wholeheartedly endorse the reviews by Warren Ewens, Michael Turelli and Montgomery Slatkin.
