SOLVED: I need an engine coolant blower motor control - Fixya

The instrument panel cluster (IPC) displays the engine coolant temperature as determined by the engine control module (ECM). The ECM sends the temperature data via high speed GMLAN serial data to the body control module (BCM). The BCM then sends the information via low speed GMLAN to the IPC in order to display the engine temperature.

Error Code P0481: Cooling Fan 2 Control Circuit Malfunction

The connector hose heater control valve is the valve that allows hot coolant from the engine to flow into the heater core. The heater core is mounted inside the vehicle, positioned near the blower motor and provides the warmth for hot air to be blown through the vents when the heater is activated.
