How to locate, test and replace the crankshaft position sensor (CKP) on a International Maxxforce DT

A crank sensor is an electronic device used in an internal combustion engine to monitor the position or rotational speed of the crankshaft. This information is used by engine management systems to control the fuel injection or the ignition system timing and other engine parameters. Before electronic crank sensors were available, the distributor would have to be manually adjusted to a timing ...

Crank sensor location - Fixya

start at a shop that has the correct scanner for your engine. i use international master diagnostic loaded onto a laptop. 2007 466's are heui motors so your best option is to hook up the scanner while you spin it over. you will need 500psi or so of actuation pressure for the computer to turn the injectors on. if you have that and you can hear the injectors clicking, check fuel supply next. also ...
