Enunciado. El teorema establece que : El trabajo realizado por la fuerza neta (suma de todas las fuerzas) aplicada a una partícula es igual al cambio que experimenta la energía cinética de dicha partícula. Esto es,  $W = \Delta K$  Este teorema es válido tanto en el ámbito de la mecánica clásica como en el de la mecánica relativista de partículas. Sin embargo, no es como lo esperabamos en la ...

Deformation in continuum mechanics is the transformation of a body from a reference configuration to a current configuration. A configuration is a set containing the positions of all particles of the body. A deformation may be caused by external loads, body forces (such as gravity or electromagnetic forces), or changes in temperature, moisture content, or chemical reactions, etc.

With the flow coefficients capacities of valves at different sizes, types and manufacturers can be compared. The flow coefficients are in general determined experimentally and express the. flow capacity in imperial units - GPM (US gallons per minute) that a valve will pass for a pressure drop of 1 lb/in<sup>2</sup> (psi) The flow factor -  $K_v$  - is also commonly used with capacity in SI-units.
