Enrico Fermi And The Revolutions

Enrico Fermi (Italian: [en ri ko fermi]; 29 September 1901 - 28 November 1954) was an Italian (later naturalized American) physicist and the creator of the world's first nuclear reactor, the Chicago Pile-1. He has been called the "architect of the nuclear age" and the "architect of the atomic bomb". He was one of very few physicists to excel in both theoretical physics and experimental physics.

In 1933, Italian physicist Enrico Fermi (1901 – 1954) named this hard-to-detect particle the neutrino, and used it to successfully explain the theory of beta decay. One type of neutrino, the electron neutrino, was finally detected in 1956.
