The range of the distribution is the difference between the minimum and maximum values. From Table 3.3, the minimum and maximum values for the haemoglobin data are 8.8 and 15.1g/100ml, so the range is 15.1 - 8.8 = 6.3g/ 100ml. The difference between the lower and upper quartiles of the haemoglobin data is 2.2g/100ml.

More Mathematics into Medicines! - ZIB

Chapter 1: Background and Purpose Introduction. The definition of essential skills in mathematics has long been a goal of mathematics educators and others interested in the school mathematics curriculum.

Medical Mathematics Formulas Flashcards | Quizlet

With percentages, the whole is always in terms of 100. For example, if a pizza is cut into 10 slices, then all 10 slices make up 100 percent, or 100%, of the pizza. Each individual slice makes up 10% of the pizza, because $100 \div 10 = 10$. Now, suppose that you eat 2 slices.
