express elevations above sea level and show the shape of the land. A topographic map may or may not include shaded relief to help visualize steep slopes.

Exercise 1 Topographic Maps Envgeology Home - Legacy  
topographic maps are produced at a variety of scales; the choice of which depends on the user. Should the user need detailed topographic information over a relatively small area, then a 1:24,000 scale map would be a good choice. On the other hand, a 1:250,000 scale map would be better for examining regional features that extend over a large area.

Exercises on Topographic Maps – Introductory Physical ...

The USGS was entrusted with the responsibility for mapping the country in 1879 and has been the primary civilian mapping agency of the United States ever since. The best known USGS maps are the 1:24,000-scale topographic maps, also known as 7.5-minute quadrangles. From approximately 1947 to 1992, more than 55,000 7.5-minute maps were made to cover the 48 conterminous states.

All topographic maps produced by the U.S. Geological Survey (U.S.G.S) are oriented with north at the top of the map. Therefore if you locate a position on the map, and move towards the top of the map you are moving in a northerly direction, and if you are moving to the bottom of the map, you are moving towards the south.
