AFACT the main changes in Bitcoin in the past 5 years have been some incremental evolution of the technology that I'm not aware of changing the fundamental usage of the product in any way (SegWit, LN, and most recently Taproot). A note on blockchain proliferation: The author considers it a bad sign that there's an explosion in new blockchains.

10 years of whatever this has been | Hacker News

"Gas fees" are the transaction fees that users pay to miners on a blockchain protocol to have their transaction included in the block. The system works on a standard supply and demand mechanism. If there is more demand for transactions, miners can choose to include the transactions that pay more, compelling users to pay more to have their transactions processed quickly and efficiently.
